

## CLIENT GUIDE

# NurseryOS

## Getting started for your nursery

Inventory, trucks, invoices, and vendor payments — one place for the yard and the office.  
Works on phone, tablet, or computer.

# Welcome to NurseryOS

NurseryOS keeps live inventory, loading trucks, customer invoices, and vendor bill pay in one bilingual workspace (English · Español). This guide covers first-week setup for owners and office staff.

## 1. Sign in & invite your team

### **1 Open NurseryOS**

Go to <https://nurseryos.app> on any phone, tablet, or computer.  
Sign in with the account you were invited with, or complete signup if you requested access.

### **2 Invite the crew (Team)**

Open Team from the header. Owner/admin can invite people by email.  
Assign roles: owner/admin (settings & payments), office/sales (invoices & customers), field/loader (trucks & inventory as permitted).

### **3 Language**

Anyone can switch the whole app between English and Spanish from their profile / language control.  
Yard and office can each work in the language they prefer.

## 2. Inventory & availability

- Add plants manually, or upload CSV / Excel / PDF catalogs.
- Set quantity, photos, planted date, and ready date on each plant.
- Export Availability (Excel or PDF) to send customers what's in stock — Ready Date shows on the list.
- Log sprays, fertilizers, and cut-backs so the yard stays in sync with the office.

### 3. Orders & trucks

- Upload or enter customer plant orders.
- Build a truck, set a loading date, and assign orders.
- Loaders check off plants on their phone; inventory updates live.
- Print or share a Bill of Lading when the truck rolls.

### 4. Invoices & getting paid (Stripe)

You do not need a Stripe account beforehand. NurseryOS creates a connected Stripe Express account when you click Connect.

#### **1** Connect Stripe

Team !' Stripe Connect !' Connect Stripe (owner or admin only).  
Stripe opens a secure form: business details, bank account, and identity.  
When finished, return to NurseryOS — you should see ready to collect payments.

#### **2** Send a pay link

Open an invoice !' create a Stripe pay link and send it to your customer.  
They pay by card (or ACH when enabled). Funds go to your nursery's Stripe account.  
Start with a small invoice to confirm everything end-to-end.

#### **Note**

Use real business EIN / SSN on Stripe's live form. Test IDs only work in sandbox and often fail in the hosted UI.

## 5. Paying vendors (Checkbook ACH)

Unlike Stripe, you create a Checkbook account first, then paste API keys into NurseryOS.

### 1 Create & verify Checkbook

Sign up at [checkbook.io](https://checkbook.io) and add your business bank account.

If Checkbook uses microdeposits, expect 1–3 business days before you can confirm amounts.

After the bank is verified, open Settings! Developer.

### 2 Connect in NurseryOS

Team! Vendor ACH Bill Pay (Checkbook).

Choose Production, paste Publishable key + Secret key, then Connect.

Copy the webhook URL shown in Team (includes your nursery id).

### 3 Webhook in Checkbook

In Checkbook Developer settings, paste that exact webhook URL.

Example shape: [https://nurseryos.app/api/checkbook/webhook?tenantId=YOUR\\_ID](https://nurseryos.app/api/checkbook/webhook?tenantId=YOUR_ID)

Optional: paste the webhook signing key back into NurseryOS.

Then pay a small vendor bill from Purchasing to confirm ACH.

## Need help?

Email [owner@nurseryos.app](mailto:owner@nurseryos.app) — we're happy to walk through setup on a call with your first invoice and first vendor payment.

## Quick setup checklist

Use this list when onboarding. Check items off as you go — most nurseries finish core setup in one sitting once bank verify is done.

- ☐ Sign in at [nurseryos.app](https://nurseryos.app) (or accept your invite link)
- ☐ Confirm nursery name and invite your team (Team)
- ☐ Add or import plant inventory (with photos + ready dates)
- ☐ Export an availability list and share with a customer
- ☐ Create a truck and load a sample order
- ☐ Create a test invoice (or small live invoice)
- ☐ Connect Stripe (owner/admin) and finish Stripe's form
- ☐ Collect one real customer card payment
- ☐ Create a Checkbook account and verify your bank (microdeposits may take 1–3 business days)
- ☐ Paste Checkbook production keys in Team
- ☐ Copy the webhook URL from Team into Checkbook Developer settings
- ☐ Pay one small vendor bill via ACH to confirm bill pay

### Tip

Stripe and Checkbook can be set up in either order. You can invoice customers before vendor ACH is ready — Checkbook only blocks paying vendor bills.
